CAN WE DO BETTER?

YES WE CAN WITH THE NEW ALLROUND+...

Improving the most popular spring machine in Europe is not an easy job, but the Allround+ has succeeded!

The new modern spring machine is a real wizard which combines all the benefits of the old Allround with new product advantages. The weight of the new Allround+ has decreased by 28%, making it easy to lift but it is still strong and robust. The Allround+ is very compact, easy to transport and the large wheels make easy work of all types of stairs.

Suitable for larger cleaning jobs the Allround+ with its powerful electric motor, inclusive capacitor, gives a solution for sewers and pipework of Ø 40 mm – Ø 125 mm.

To deal with stubborn blockages in larger pipes, the springs are supplied with square couplings in order to connect a wide range of accessories, for all different kinds of blockages.

The Allround+ has a closed drum of synthetic material, not only for safe working methods, but also in order to keep the work area clean. The drum can be changed or removed in no time and can be carried separately. The new redesigned automatic spring feed unit allows the spring to feed in and out of the drain with one movement. This all in a safe and easy to use operation.

The Allround+ has an integrated tool case with 5 standard accessories. A further extensive accessories kit is also available including a special tulip cutter, chain flails, cutting knives and drilling heads to name a few.

With its new modern design and increased operating, usability and servicing advantages the Allround+ will forget its predecessor soon.
